Bandgap Reference Circuit

- PTAT: One that increases proportionately with temperature and is called proportional to absolute temperature or PTAT. $V_{BE} = \frac{kT}{a} \ln \left(\frac{I_C}{I_c} \right)$
- CTAT: One that decreases proportionately with temperature and is called complementary to absolute temperature or CTAT. $V_T = \frac{kT}{a}$

VBE of BJT as CTAT

$$V_{BE} = \frac{kT}{q} \ln \left(\frac{I_C}{I_S} \right)$$

Is = Saturation Current of BJT

Extracting PTAT

- Make I1 = I2 = I and V1 = V2 using current mirror or OpAmp
- $V_{BE_1} = RI + V_{BE_2}$
- V_{BE_1} V_{BE_2} = RI
- $\frac{kT}{q} \ln \left(\frac{I_C}{I_S} \right) \frac{kT}{q} \ln \left(\frac{I_C}{NI_S} \right) = RI$ [Assuming identical BJT] $\bigvee_{EB1} = \bigvee_{I_S} \left(\frac{I_C}{I_S} \right) = \frac{kT}{q} \ln \left(\frac{I_C}{NI_S} \right) = \frac{kT}{q} \ln \left(\frac{I_C}{NI_S}$

• $\frac{kT}{q}\ln(N) = \text{PI}$ PTAP Current • Use CM to generate multiple copies Q1 • I = $\frac{kT}{qR}\ln(N)$ Prop it across a resistor to generate PTAT Voltage
